1 Phases

High-level steps your user needs to accomplish from start to finish

Create the account

Can set daily and monthly budget. Also can add goals.

Entering income details to track how much they spend and save

Attaching mail account in order to receive reports over a week / month / year according to their preference

2 Steps

Detailed actions your user has to

User mobile number/email to create account and setting up the profle

Entering the expenses

Creating categories expenses

Analyzing the reports in intervals to get an idea of where they are spending their money

**G** Feelings

What your user might be thinking and feeling at the moment

It is easy to create account with mobile

number

Is it secure to include my finance details here? May be I should stop spending my money on (unnecessary expenses)

> Keeping track of each penny is kind of difficult

l can see where my money is going

user interface is not simple to distinguish income and expenses

I can use the reports to design the budget better this time

Looking into the expenses and fguring out the unnecessary expenses each time is really time consuming. Le thoro an automatic
